

João Vitor Fernandes de Sales

Software & Data Engineer | Python, Next.js, SQL, AWS, Azure, Typescript

joasales911@gmail.com | +55 84 98891-9268 | Brazil (UTC-3) | linkedin.com/in/joaofdsales | github.com/jovitif

Summary

Data Engineer with a strong software engineering background, specializing in ETL pipelines, data integration, and Python backend development. I develop scalable data solutions, automate workflows, and build reliable APIs using Python, SQL, PostgreSQL, SQL Server, and AWS. Passionate about solving complex data challenges and creating efficient systems that transform raw data into valuable business insights.

Technical Skills

Data Engineering:

Python • SQL • ETL • Data Integration • Data Migration • PostgreSQL • SQL Server • Power BI • Fabric

Backend & Integration:

Java • Ruby on Rails • REST APIs • System Integration • Workflow Automation • n8n

Frontend:

Next.js • TypeScript • Tailwind CSS

Cloud & Tools:

AWS • Azure • Docker • Git

Currently Learning

Microsoft Fabric • Apache Spark • Apache Airflow • dbt

Languages:

Portuguese (Native) • English (B2 – Upper Intermediate) • Spanish (Basic)

Experience

Dunnas Tecnologia e Consultoria (Evertec) — Junior Software Developer 2025 – 2026

- Developed and customized banking solutions for multiple financial clients using Java and SQL Server.
- Implemented business rules and system enhancements involving complex SQL queries, stored procedures, and transactional data processing.
- Worked with data persistence, validation, and integration within enterprise financial systems.
- Participated in requirements refinement, sprint planning, and software delivery in a Scrum environment.

Prefeitura de Mossoró — Full-Stack Developer (Intern) 2024 – 2025

- Designed and developed an ETL platform using Python (Django) to automate data migration, transformation, and validation processes.
- Built integrations between heterogeneous data sources, databases, and JSON-based systems.
- Worked with structured data processing, database integration, and data quality workflows.
- Developed supporting web applications using React.js and Ruby on Rails for municipal services.

UFERSA — Intelligent Chatbot Developer (Research Project) 2024 – 2025

- Developed automation and integration workflows using APIs, Node.js, and n8n.
- Designed data collection and processing flows for AI-assisted healthcare applications.

Compass UOL — AWS Intern (Machine Learning) 2024

- Worked with AWS cloud services and serverless architectures.
- Developed APIs and integrations involving machine learning and cognitive services.
- Gained experience with cloud-based data processing and distributed systems.
- Earned the AWS Cloud Practitioner certification.

Education

Bachelor's Degree in Computer Science

UFERSA — Universidade Federal Rural do Semi-Árido
2021 – 2025

Relevant Areas:

Data Processing • Database Systems • Software Engineering • Cloud Computing
